Career Summary

Results-driven DevOps Engineer with experience in Kubernetes environment management, deployment automation, and network operations. Skilled in troubleshooting complex technical issues, and optimizing deployment workflows to improve efficiency and minimize downtime. Proven ability to collaborate with cross-functional teams and develop solutions that enhance operational performance. Passionate about continuous improvement, automation, and building reliable, scalable infrastructure.

Education

Missouri University of Science and Technology — May 2024
B.S. Computer Science — GPA 3.5/4.0
B.S. Computer Engineering

Experience

Spectrum — Denver, CO
Dev-Ops Engineer II — SEP 2024 – NOV 2026

- Administered and sustained Kubernetes test environments, facilitating routine daily rollouts to guarantee continuous system operational availability
- Monitored environment health and resolved post-deployment issues to maintain system availability and minimize disruptions for testing teams.
- Collaborated with development and QA teams to validate code deployments, troubleshoot errors, and resolve environment-related issues.
- Streamlined deployment workflows through process improvements and automation, significantly reducing manual errors and accelerating environment upgrade times.
- Reorganized and modernized internal technical documentation and knowledge bases, improving accessibility, accuracy, and usability for engineering teams.

Ameren — St. Louis, MO
Network Operations Co-Op — May 2022 – Dec 2022

- Monitored and maintained network connectivity for over 1,000 devices, ensuring high availability and performance
- Collaborated with Network Operations team to troubleshoot and resolve technical issues with servers, Wi-Fi, VPNs, switches, and hubs using ServiceNow
- Utilized network management tools to analyze traffic patterns and optimize network performance
- Configured and maintained a testing lab for team evaluations, streamlining the development and testing process
- Documented network configurations, procedures, and incident responses for knowledge sharing and future reference

Skills

Git Hub	Kubernetes	MySQL	Bash
Jira	Confluence	C++	Python
GitLab	Splunk	Data Dog	Harness
